Re: New breather

Dear Sirs,

With the scope of standardizing the components the breather of the R 69S i.e. the sport model is installed on the R 50 models effective of frame No. 644 286 and on the R 60 models effective of No. 1812 443.

Owing to this measure the following parts are superseded:

1 Breather plate with pressed-in drive pins	00 31 170
1 Pressure spring for the breather plate	00 31 152
1 Spring ring	99 33 451

New parts:

1 Breather plate with cast-on drive pins	00 31 171
1 Lock ring for breather plate	00 31 707
1 Washer	10 30 116

When exchanging the gear train for crankshaft and camshaft or the breather elements it is absolutely necessary to bear in mind that the new breather pertains to the gear train, part No. 00 16 379 - 399, and the hitherto installed breather to the gear train, Part No. 00 16 329 - 349.

A confusion of the parts is possible and would entail an insufficient ventilation of the crankcase.

Very truly yours,

BAYERISCHE MOTOREN WERKE
